Insights and Strategic Recommendations

Insights

- The bank is experiencing ~20% churn, primarily driven by average tenure 5 years and single-product customers, especially in high-risk regions like Germany
- A significant ₹186M in balances is at risk as churn is concentrated among exited members and low-product customers, indicating engagement rather than income is the stronger predictor of exit
- Inactive customers across age groups, particularly in the 50+ segment holding higher balances, are churning despite strong income levels, highlighting behavioral disengagement as a key risk factor
- While customer acquisition remains steady, persistent churn across mid-credit and early-tenure segments is offsetting growth, signaling the need for targeted retention strategies in vulnerable customer cohorts

Recommendations

- Implement a structured onboarding journey for customers within their first 12–24 months, including welcome incentives, relationship manager check-ins, personalized financial tips, and fee waivers to strengthen early engagement and reduce first-year churn risk.
- Introduce bundled product packages (e.g., savings + credit card + insurance) with discounted fees or reward multipliers for multi-product ownership to reduce churn among single-product customers and increase switching costs.
